

AusTimber are the industry leaders in timber cladding systems and associated products and we have been supplying both commercial and residential projects for more than 30 years.

They say that imitation is the sincerest form of flattery, well, even our competitors attempt to copy our innovative ideas.

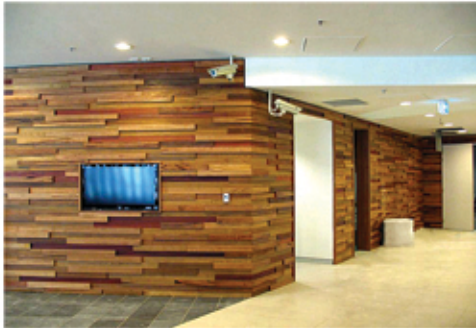

The widest range of durable species, flexible design options with custom profiles and a full range of complimentary trims & mouldings readily available.

We also supply a full range of architectural products such as skirtings, T&G timber flooring, stair components, decking, and timber handrails
- In over 20 different timber species

Aus-i-Clad “Premium” hardwood cladding.

Sample of projects

Australian National University (Canberra)

Varied width & thicknesses in a mix of species combine to create a random block effect. All boards are T&G and docked to pattern to simplify installation.

Rushcutters Bay Park

Blackbutt was chosen by the City of Sydney as the primary species for this project which features innovative shiplap cladding to follow the rounded corners of the kiosk and included motif cutouts to give the project a maritime feel. (included a grandstand & amenities building).

Point Grey Apartments (Lorne)

A project with an (almost) ocean frontage, utilizing Blackbutt for its charm and durability. Blackbutt, being the most readily available (class #1) durable timber, can be supplied in many different profiles to compliment your cladding (trims, stops, battens, decking, flooring, beams, posts, handrails, etc.)

Karingal Family Hub (Frankston)

Being in a known termite area, the architects wanted to use a timber with a warm character, yet which would be safe from termites. Turpentine was chosen for its long lasting durability and a T&G, dual width & thickness profile was used to give a 3 dimensional effect.

Craigieburn Children’s Hub

With a mix of Silvertop Ash, Blackbutt, Ironbark and Brushbox components, combined with striking coloured panels and furniture, this building creates a very warm and modern atmosphere, allowing the children to feel right at home.

Aus-i-Clad "Premium" hardwood cladding.

With Australian hardwood timber cladding from AusTimber you get:

- * Most extensive range (profiles & species)
- * Flexible custom options
- * Genuine product knowledge
- * Highest natural durability
- * All cladding kiln dried to Australian Standards
- * Produced from sustainable resources
- * 21 mm thickness (more stability)

Portsea
140 x 21 (125 cover)

Lorne
140 x 21 (125 cover)

Shiplap T&G
140 x 21 (125 cover)

Channel Lap
140 x 21 (125 Cover)

Scalloped Lap
140 x 21 (125 cover)

Shadowline
185 x 21 (170 cover)

VJ/SL Reversible
140 x 21 (125 cover)

Monterey
90 x 21 (75 cover)

Greenway
140 x 21 (125 cover)

Manly
185 x 21 (160 cover)

Donvale
140 x 21 (125 cover)
& 60 x 32 (45 cover)

Selected profiles also available in other widths (65, 90, 140 & 180mm) and/or thicknesses (16, 19, 21, 32 & 42mm)

Complimentary custom trims & mouldings also available (storm moulds, corner stops, decking, stair treads etc.)

Available in a wide range of timber species - Selected species available as 'set-lengths'

Custom profiles can be made to order - Please email us with a sketch of your profile

Aus-i-Clad "Premium" hardwood cladding.

Some popular species: (other species are also available)

Blackbutt (Class #1)

One of the most readily available of the class #1 timbers, blackbutt can be supplied in the widest range of sizes and complimentary products.

Spotted Gum (Class #1)

Spotted Gum is a very popular choice by architects for its colour, durability and availability.

Grey Ironbark (Class #1)

Ironbark is a very hard timber and is one of the most durable and sought after species available.

Silvertop Ash (Class #2)

A popular choice due to its rustic appearance and cheaper price.

Red Mahogany (Class #1)

The rich, warm colours of red mahogany make it a good choice for matching with the earthy tones of natural stone and clay.

Turpentine (Class #1)

Another very durable timber with rich warm tones. Turpentine has been a favourite for building wharves for over 100 years due to its resistance to attack from wood boring organisms.

American Oak (Class #2)

This is a very popular species for internal lining boards. With a strong grain character, it is often used in conjunction with black stain to create a striking effect.

The above species are the most commonly requested timbers but we have many other timbers in stock that can also be run into cladding profiles. - Please enquire if you are searching for something not listed above.

Please be aware that within any species there will be natural variations in colour and features and that colour depicted may vary between computers and/or printers. Species shown as "raw" and may appear darker with finish coatings applied.
